Susie -- EPA concurs with the fish tissue compositing memo, with the exception of a couple of items in table 1.

EPA has the following concerns with the table:

1) Brown rockfish have a very limited home range, therefore, please compare individual tissue samples to tissue TRVs as well as comparing the TRV to the UCL. These samples represent localized areas that may be of concern.

2) For brown rockfish eating mussels, please use individual mussels samples. Again, rockfish have a limited home range and would not be feeding across the entire harbor.

Table 1 would be better addressed in the Ecological risk assessment tech memo and therefore this table should be removed from this document and moved to the eco-tech memo.

If there is agreement regarding removing table 1 from the fish compositing memo, then please consider this memo approved and send me a final version electronically along with 2 hard copies and 1 CD.

Thanks

Ravi

Subject Proposed fish compositing memo

USEPA SF

1402915

Here is a draft memo describing our proposed fish and shellfish compositing scheme. Please let me know if you have any questions or concerns. We look forward to discussing this in detail on Wednesday, October 1.

Thanks.
Susie
